JavaScript and TypeScript fluent developer and content creator with 10K+ views on [my hashnode blog](#) and growing my YouTube content with over 1.5K views so far. I have 3 years of experience creating full-stack web apps with experience in React, Next, Node, MongoDB, postgresSQL, microservices, unit testing, algorithms and dockerizing production level web apps with Docker.

PROJECTS

Kanban Task Management System

[LIVE DEMO](#)

[Github Repo](#)

Full stack app features:

- 100% pixel-perfect fully responsive app built from Figma design. Looks and functions on small, medium and large devices.
- Create, read, update, and delete boards and tasks
- Receive form validations when trying to create/edit boards and tasks
- Mark subtasks as complete and move tasks between columns using drag and drop feature
- Hide/show the board sidebar
- Toggle the theme between light/dark modes
- App state is preserved on refreshing using local storage and Prisma as an ORM and MongoDB as a database

NEXTFLIX

[LIVE DEMO](#)

[Github Repo](#)

Full stack Next.js app:

- User authentication using JWT and Magic passwordless login.
- PostgreSQL and GraphQL using Hasura
- Server-Side Rendering, Static Site Generation and Incremental Static Regeneration for the best performance and SEO.
- Browse movie trailers using YouTube API
- Add movie trailers as favorites
- Creates a watch again list to track watched trailers

MUSICA (Spotify Clone)

[LIVE DEMO](#)

[Github Repo](#)

Built this full-stack Vue.js web app in 20 days to prove my ability to adapt to new technologies when I worked at Slik.

- sign up/login using Pinia, Firebase & Firestore
- see the list of all songs available and listen to them
- upload songs and play/edit their info
- Intensive form validation
- add comments after authentication to a specific song and see others' comments
- internationalization i18n and translations for both (EN | NL).

Crwn Shop

[LIVE DEMO](#)

[Github Repo](#)

- User authentication and authorization using Firestore
- Shop and users data stored in Firebase
- Users can add items to the cart go to the checkout page where you can add and remove items from the cart
- Payment through Stripe API
- State management is handled by Redux and Redux Thunk.

WORK EXPERIENCE

Full Stack Developer - Internship

Slik - Rotterdam, The Netherlands

2 months/2023

- Improved user experience by adding a new full stack feature where clients can add and update proposal numbers to each proposal they create and keeping it consistent throughout the application in different pages.
- Improved the developing experience by implementing proper TypeScript in the codebase and fixing bugs.
- Learned NestJS and Vue.js

React.js | Node.js Developer - Internship

Focal X Agency - Lattakia, Syria

02/2021 - 07/2021

- Allowed recruiters to look up for information about the employees and the interns in the company by building the API using Node.js, Express.js and MongoDB.
- Was responsible for teaching other less experienced interns about React and Node.js.
- Showed my proficiency of the MERN stack by building a full stack chat application using Node.js and socket.io.
- Developed my communication skills by collaborating with my teammates in marketing, design and web development teams to discuss product-related meetings.
